

GLAMOUR BY METZELER.
SLEEP IN PERFECTION.

The innovative Metzeler Air-Channels ensure perfect air circulation

Tested and recommended by Forum: Gesunder Rücken - besser leben e.V. and the Bundesverband deutscher Rückenschulen (BdR) e.V. Further information available from AGR e.V., Pf. 103, 27443 Selsingen, Phone +49 4284/92 69 990, www.agr-ev.de

AirLine Channel. The mattress for an ideal sleeping climate.

The **Air-Channels** are the breathable heart of every Metzeler AirLine Channel mattress. They form a vertical system of tubes for perfect air circulation while you sleep and are incorporated all over in a variety of hardness grades.

With the especially soft Air-Channels in the shoulder area, perfectly ergonomic rest is guaranteed. The lateral Air-Pipes permit additional horizontal ventilation of the mattress and support the Air-Channels in circulating the air.

Together, Air-Channels and Air-Pipes are a unique combination for excellent ventilation.

Thanks to this innovation, you enjoy pleasant benefits:

Ideal ventilation, less moisture and perfect bedding hygiene.

Mattress available in the hardness grades H1 (super soft), H2 (soft), H3 (medium), H4 (firm) and H5 (extra firm).

Multi-zone domed cut technology for ideal adaptation

Perfect support in every position

The AirLine Channel pillow ensures optimum comfort in every sleeping position. The vertical Air-Channels transport moisture quickly away from the neck – so you enjoy an ideal sleeping climate and relaxed rest.

AirLine Channel GLAMOUR.

Thanks to the domed gap in the upper side of the foam, **the innovative multi-zone dome cut** technology of the **Rubex® Nawaro TrioCell** comfort topper ensures ideal adaptation to your body shape, making it easier to turn over while sleeping.

The **Tencel®** fibre in the cover of every Metzeler AirLine mattress combines many benefits: It is as soft as silk, as cool as linen, as warm as wool and as absorbent as cotton. Excess moisture is absorbed and released quickly to the ambient air.

The cover made of **66 % polyester functional fibre** and **34 % Tencel®** is worked in a modern design with 20 mm Hypersoft. The climate band around the sides completes the outstanding climate properties. With 6 or 8 turning loops, removable by means of all-round zipper, washable at up to 60 °C.

Core height: 22 cm, total height: 26 cm

Further mattresses from the AirLine Channel series:

DELIGHT, 22 cm total height

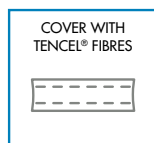

STYLE, 24 cm total height

PLEASURE, 21 cm total height

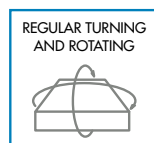

All figures approx.

Enjoy deluxe sleep!

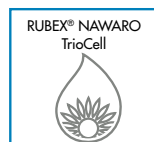

The comfort base made in high-quality **Rubex® Nawaro TrioCell** cold foam consists of 33 % each of small, medium and large pores. The large pores ensure optimum pressure discharge, the medium pores provide ideal pressure distribution. The additional pressure-supporting performance of the small pores ensures ideal adaptation to the body shape. Enjoy this unique comfort!

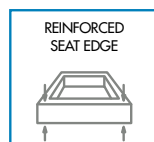

- ① Cover with Tencel® fibres for perfect moisture management and optimum climate regulation

- ② Regular turning and rotating for longer service life and greater comfort

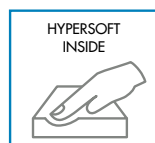

- ③ Rubex® Nawaro TrioCell: manufactured using renewable raw materials (by preference sunflower oil)

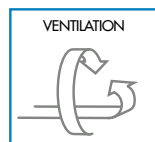

- ④ Lightly reinforced seat edge makes getting in and out easier

- ⑤ Multi-zone comfort system for ideal adaptation from head to toe

- ⑥ Metzeler Hypersoft-foam: spot elastic, shape-retaining, tear resistant and pressure discharging

- ⑦ Air-Channels and Air-Pipes for optimum ventilation and breathability

- The AirLine-aktiv slatted frame completes your individual AirLine Channel sleeping system (see next page)
