

## **ZITZI™ STARFISH PRO**

**Combined toilet-  
and shower chair**

# Zitzi Starfish Pro

A combined shower and toilet chair. Strong construction completely in stainless steel with a lot of adjustment possibilities to provide the best support and position for the user.

## Step 1. Hip- & leg position

The combination of a correct set seat part, seat slope, effective hip belt and a good support for the sacrum take away the possibility to shear for the user. This makes it easier to conduct activity and postural control. The adjustment on the seat part is stepless in seat depth, width and abduction/adduction, this allows for a completely individual adaptation of the set part. At the same time Starfish Pro allows the user to grow with the product.

## Step 2. Placing the hip belt

A correct mounted hip belt positions the pelvic in such a good way so that it prevent shear completely. For Starfish Pro there are many different hip belts available to choose from.

**2-points belt**  
1 mounting per side

**4-points belt**  
2 mountings per side

**Anti-rotation belt**  
2 mountings per side

Correct mounted 4 point belt.

## Step 3. 3-point positioning

Adjustable trunk support together with hip support create a good possibility to achieve a great positioning for the trunk and this reduces the risk to get in the wrong position and eventually create a malalignment. Good postural control leads to better head control and increases the possibilities for activity and function. Starfish Pro has the possibilities to both correct and keep the users trunk in a good position depending of course on the users possibilities to do so.

### Positioning Harnesses

Together with the hip belt the harness give a good support to be able to position the trunk and make it easier to have a good head control. We provide two different positioning harnesses as a standard option.

#### Sternum support

- Give concentrated support on the sternum.
- Counteracts fall forward

#### H-strap

Great up stretch for the shoulders and counteract a rotation. Fits great for user with a gavage.

## Step 4. Hip angle adjustment

Dynamical supports and materials give freedom of movement, variation and can give a calming effect when You have extension spasticity. The back is angle adjustable which allows the user to get in His/Her perfect hip angle to brake spasticity.

## Manual chassi

*Picture shows:*

Zitzi Starfish Pro size 1-2 with adjustable back and driving bow

### Headrest

The three joints arm give an optimal adjustability. The headrest is also adjustable in height.

### Positioning

The mounting hardware for the harnesses is adjustable in height and sideways.

### Lateral support

Individually adjustable

### Stainless

The complete construction is stainless steel.

### Height adjusted back part

To increase the postural control

### Manual

Manual adjustable height of the seat part.

### Footrest

A lot of different footrest to choose from.

### Adjustable back

This allows for a better postural control which reduces the risk to get malalignments and increases the possibilities to do activities. In Starfish Pro we are able to both correct and keep the user in a good position depending of course on the users possibilities.

### Adjustable tilt and hip angle

Fixed supports is needed to position the user and create a functional seating position. Movement in the materials create a dynamic seat which allows for a certain amount of movement and variation, this creates a calming effect and works great if the user have extension spasticity for example.
